

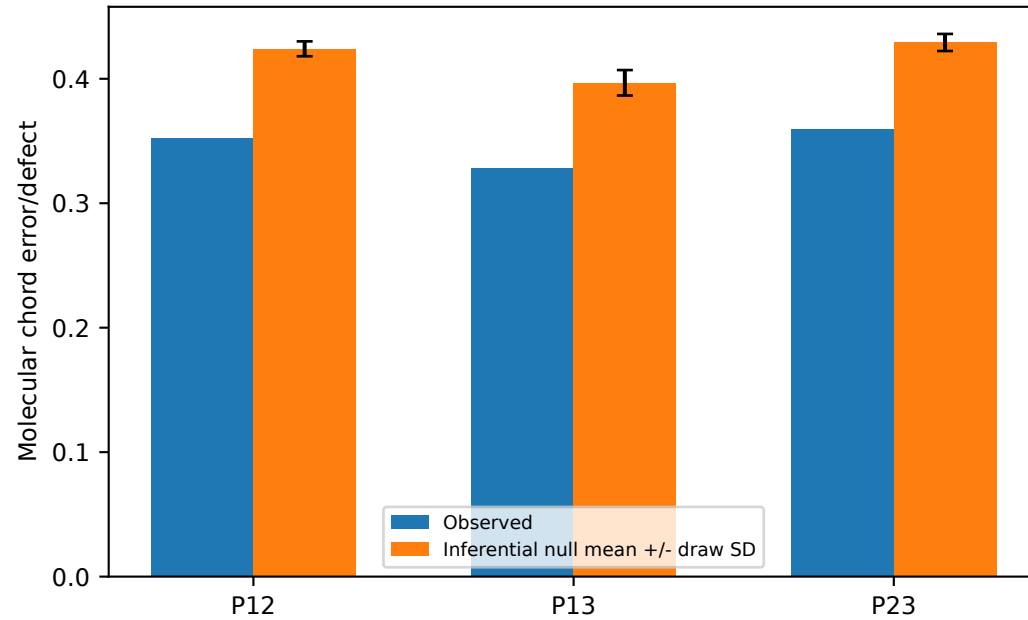

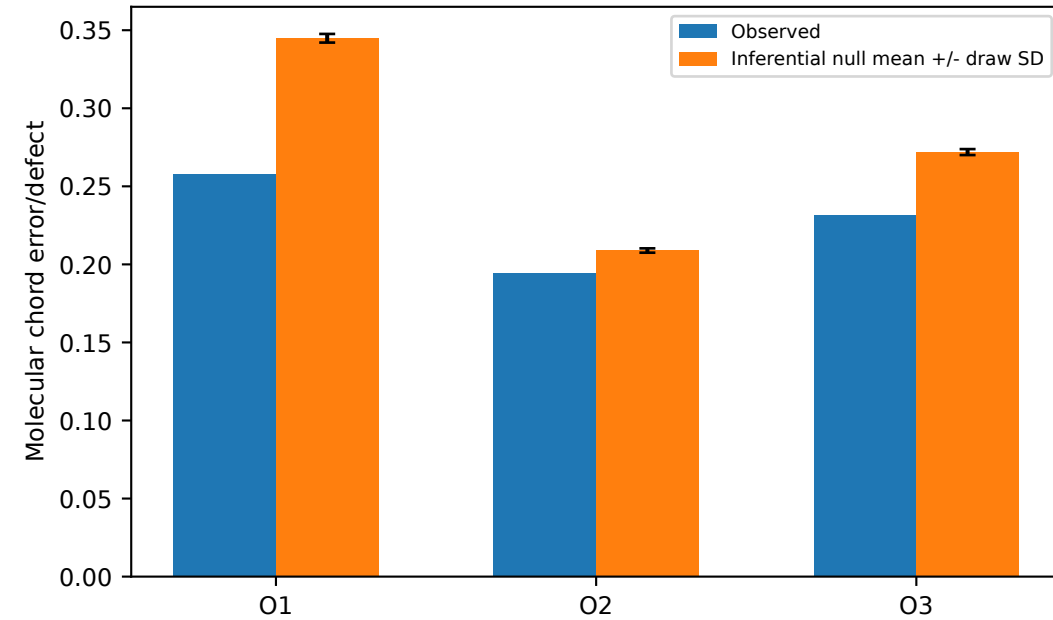

Figure 2. Construction-held-out molecular validation

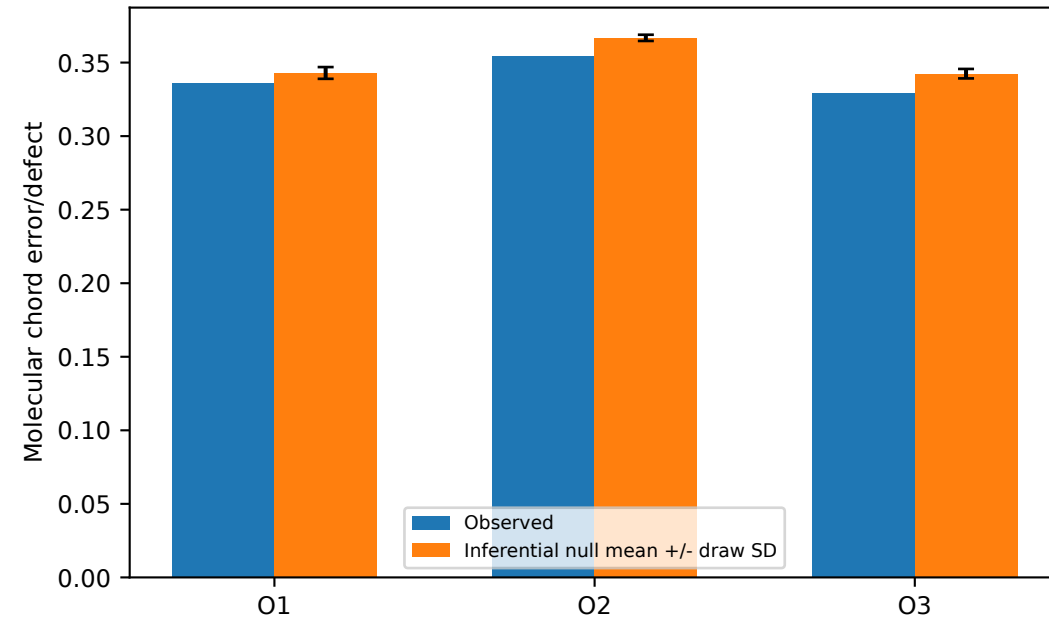

A Landmark-edge GR agreement

B Matched GR coherence

C Degree-controlled GR fidelity

D Unified calibration for the primary family

All three fidelity reductions positive.
Calibrated sum tail = 0.00097561
Calibrated minimum tail = 0.00097561
Calibrated O1 maxT = 0.122927
O1 remains individually unsupported.

Family support does not imply marginal support.
Draw SD is not biological-replicate uncertainty.
